The Diode Difference

XM0059D

At Diode Dynamics, we conduct all necessary engineering and testing for our products internally in St. Charles, Missouri. Unlike other manufacturers, we test the LED bulbs inside factory lamps, to check the resulting performance and output. We conduct this testing in-house with our goniometer, which is a machine that slowly rotates a factory lamp, and measures the effective beam pattern.

Many of our products are proudly produced in-house by our manufacturing division. This allows us to maintain complete quality control with the final application in mind and deliver products to the market much quicker than others in the industry.
